

Make one source useful.

Pharma CI starter guide

September 17, 2026 · 11:15-11:45 EDT

1. Choose the source and decision. Known records reveal amendments; listings discover new records. Check pagination and linked documents.
2. Save the evidence and dates. Keep publication, detection and actual capture times separate. Leave unknown dates unknown.
3. Write the rule. Include small edits, sites, eligibility or results when the reviewer needs them.
4. Choose delivery. Review every captured edit, or only **IMPORTANT** changes. Test the capture before relying on filtering.
5. Name the reviewer, backup and maintenance owner. Record the action and inspect source failures before expanding.

Every Visualping change event has a binary **IMPORTANT** flag and an AI Summary. The saved comparison remains the evidence.

[Download the full pack](#): 22 source entries across 23 URLs, prompts, templates and actual saved examples. Unzip and open index.html.

[Optional skills for your AI assistant](#). The manual first run needs no API key or M365 connection.

Check the source before routing.

The FDA example contains a saved comparison and an earlier capture. The added Isembyld entry is the observation.

FDA Novel Drug Therapy Approvals for 2026

Search:

Export Excel

No. ▾	Drug Name	Active Ingredient	Approval Date	FDA-approved use on approval date*
39.	Isembyld	apitegromab-mstn	9/11/2026	To treat spinal muscular atrophy in adults and pediatric patients 2 years of age and older who are currently receiving an SMN2-targeted treatment
38.	Etcamah	camizestrant	9/4/2026	To treat hormone receptor-positive, human epidermal growth factor receptor 2-negative, locally advanced or metastatic breast cancer upon detection of ESR1 mutation during aromatase inhibitor and CDK4/6 inhibitor therapy

Original highlighted comparison. Observed 11 September 2026. Exact provenance is in the evidence folder.

Proposed review

A regulatory-intelligence reviewer opens the approval detail, checks asset and indication scope, and decides whether the briefing needs an update. The owner and action are proposed.

[Read the evidence notes](#). Saved source evidence does not establish a completed M365 run.

Choose the rule for the question.

Trial

Status, dates, enrollment, arms, eligibility, outcomes and results. Add country/site changes explicitly when needed.

Pipeline

Programs, indications, phases and published status. Preserve what the source says about the change.

Brand or provider

Wording, images, claims, prominence, price or stated availability. Small edits may matter.

Congress

New or changed sessions, abstracts and presentations. Open the linked material for its contents.

Guideline or access

Version, population, coverage terms and recommendation. Keep draft and final status distinct.

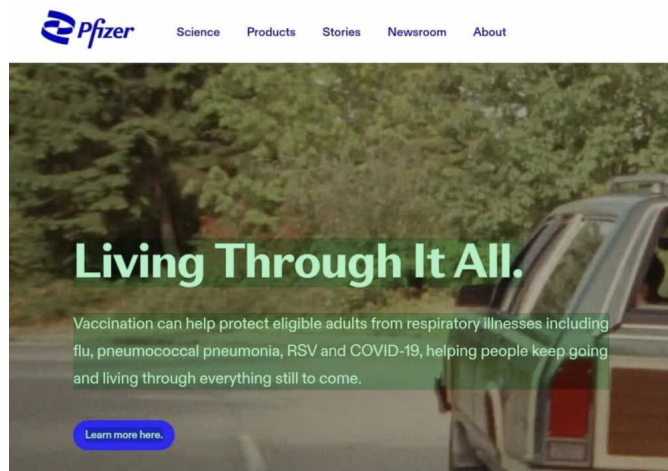

Regulatory approval

New approval-list entries. Watch labels and detailed documents as separate sources when needed.

The trial exercise reports 171 to 169 sites in its saved AI Summary and `IMPORTANT=false` under a narrower rule. Test whether your project needs a different rule.

[Full copyable rules](#) and [source-check exercises](#).

Watch the commercial message.

Actual Pfizer homepage comparison, detected 9 September 2026. Original highlighting shows campaign headline and vaccination wording.

Give the edit a reviewer

Proposed owner: brand or commercial CI reviewer. Next action: check the message and decide whether the competitor brief needs updating.

The pack also includes a CVS availability-announcement example. A services-page announcement prompts a source check; it does not establish current local stock.

Separate before captures for these two examples were unavailable. Describe the highlighted content and keep prior copy unknown.

[Open the commercial examples.](#) Choose every-edit delivery when the brief requires small wording or image changes.

Give the alert an owner.

Shared mailbox → Power Automate → SharePoint review queue. Add a Teams notification after the queue item exists.

Keep the source, saved classification, reviewer, backup and action together. A platform event ID and an email message ID identify different things.

Before enabling the route, verify tenant permissions, connections, duplicates, missing evidence and failure handling. The included recipe has no verified tenant execution.
